

From what two places can you choose a transition effect?

Choose transition effects from the Effects tab in the Browser and the Effects menu.

When you use the automatic approach to applying a transition, what must you do first?

Before applying a transition from the Effects menu, you must target the edit point.

What are three ways to change the duration of a transition in the Timeline?

Drag the edge of the transition icon; Control-click the transition icon, choose Duration from the shortcut menu, and enter an amount in the Duration window; or open the Transition Editor, and change it in the Duration field.

What are the three ways a transition can be aligned to an edit point?

Use Center On Edit, Start On Edit, and End on Edit.

How can Command-C and Command-V be used on transitions?

Selecting a transition and pressing Command-C copies the transition. Moving the playhead to the target edit point and pressing Command-V pastes the copied transition.

How do you open the Transition Editor?

Either Control-click one side of the transition icon and choose Open [type of transition] from the shortcut menu, or double-click one side of the icon in a sequence clip.

How are more-complex transitions different from dissolves?

They have additional parameters, such as border width and color, that can be adjusted in the Transition Editor.

What RT setting should you choose when you want to preview as many effects in your sequence as possible?

Choose Unlimited RT and Dynamic.

In what 3 ways can you save a favorite transition?

From the Transition Editor, drag the "drag hand icon" to the Effects tab and release it in the Favorites bin; choose Effects > Make Favorite, or press Option-F.

How do you set a new default transition?

Control-click the transition in the Effects tab and choose Set Default Transition from the shortcut menu.
