

What is the most efficient way to find the audio peaks in a sequence?

Using the Audio Peaks function, located in the Mark menu.

How are audio peaks indicated in the Timeline?

By markers in the Timeline ruler area where each audio peak occurs.

What can you do to determine whether an image falls within the broadcast safe range?

Choose View > Range Check > Luma, and move through the sequence to see where the out-of-range clips are.

How can you correct an out-of-range clip so its range is acceptable for broadcast?

Apply the Broadcast Safe filter to the clip.

What two tools can you use to help prepare the audio and video of your sequence for output?

The Audio Mixer and Video Scopes

What is a self-contained QuickTime movie?

A movie that uses Final Cut Pro sequence presets and that can be played on any computer without having the original media files present.

When might you use the QuickTime Conversion option to export a sequence?

When you want to export a sequence at settings other than the current ones (for example, for the web or a DVD).

What are the three ways you can output a sequence to tape?

By recording manually, or by using the Print to Video or Edit to Tape options.

What Export command do you choose to create a list of clip information?

Batch List.

Keyboard: Command-Option-L

Opens audio Gain Adjust

Keyboard: Control-Z

Toggles Excess Luma Range Check on and off
