

What do you click to convert a group to 3D?

Click the 2D/3D icon in the status column in the layers tab

How do you access the Z-coordinate fields for parameters such as Transform>Position in the inspector?

Click the disclosure triangle next to the parameter to reveal the individual coordinate fields

What does dragging to red, green, or blue 3-D axis handles (arrows) due to an object when the adjust 3D transform tool is active?

Dragging the red arrow moves an object along the X-axis, green along the Y-axis, and blue along the Z-axis.

Whenever using the HUD to move an object in 3-D space, name one parameter you should be aware of

Adjust around. A setting of world axis may move an object in a different direction than a setting of local axis
